The Games.

Enjoy a social game of classic darts digitized to entertain everyone from beginners to professionals. Simply a game with no losers.

Race from 201 down to exactly zero. The first player to finish on zero wins – no more, no less.

Score the most points over 9 rounds to win. Miss your target, and the axe drops – cutting your score in half.

The classic game. Start at 501 and work your way down to zero as fast as possible. The final dart must land in a double, and you must finish exactly on zero.

Each round has a target number. Hit a single, double, and triple of that number in one turn to score a "Shanghai." Highest total score after 7 rounds wins

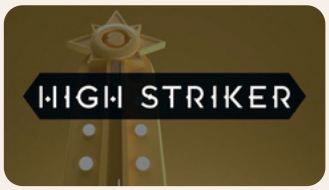

Hit your assigned number to earn shields. Reach three shields to become a "killer," then knock out your opponents by hitting their numbers. Last player standing wins.

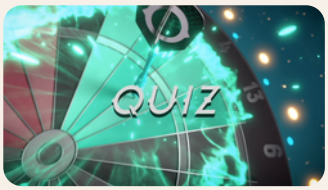

Hit a number three times to open it and start scoring. Opponents can close numbers to block you or open their own to score. Strategy is key to winning.

Beat the previous player's score – or lose a life. Lose all your lives (or "biceps") and you're out. Last player remaining takes the win.

Test your knowledge with over 1,000 questions. Hit the correct segment to answer – faster throws earn more points.
